About

Hack for a day. Build it together. Leave it open for whoever comes next.

Hacktoberfest Hack Day Roncade x H-FARM is a free, in-person Hack Day for people who want to build with open-source technologies, open-source AI, and open-weight models. Developers, designers, students, contributors, makers and tech enthusiasts: bring your laptop, your experience, or simply your curiosity, and spend a day turning an idea into something real.

This is not a day of slides, polished decks, or shipping four rushed pull requests. It’s about learning in public, collaborating across disciplines, and making a useful, creative, working project in only one day.

How the day works

You can arrive with a team or find one on the day. We will start with a few guiding challenges inspired by real needs, while leaving plenty of space for your own idea.

Hack time: design, prototype, code, test, rethink and keep going. Mentors with development, AI-model and design experience will be around throughout the day to help refine your perspective and exchange ideas. Short talks on creativity, open source/AI and design will give you fresh input at key moments.

At the end, every team will publish its project with an open-source license and a README, then show the product in a relaxed demo and networking session. No pitch deck required: let what you built do the talking.

What we value

We are not looking for the biggest or most complicated project. We care about:

- a useful or genuinely creative idea;
- thoughtful use of open-source technology, open-source AI or open-weight models;
- a working, well-crafted product and a clear demo;
- design and UX (not only code);
- openness: an open-source license and a README that makes it easy for others to continue the work;
- the journey: the choices, pivots, discoveries and collaboration behind the project.

Who is it for?

Everyone who is excited to build: tech enthusiasts, software engineers, architects, designers, open-source contributors and maintainers, students, startup and company professionals and people who are simply ready to experiment. You do not need to be an AI expert or a seasoned open-source contributor. Mixed teams are encouraged, and non-technical perspectives matter.

What to bring

Bring your laptop, a charger, and an open mind, we'll take care of the rest: space, Wi-Fi, power, mentors, and the fuel to keep you going. Come ready to build; we'll make sure no one hacks on an empty stomach. ;)

Registration

Participation is free. Registration and the final event details will be shared through the official Hacktoberfest Fest page.

Legal notice

By attending the event, you authorize the organizers to take photographs and video recordings and to use this material for documentation, communication, and promotional purposes related to Hacktoberfest and H-FARM.

See you at H-FARM. Let's turn bold ideas into open-source projects others can build on.

  Best Open-Source AI Project

  Exclusive Hacktoberfest 2026 Winner DEV Badge & MLH Swag Bag

  Build an original project that uses open-source or open-weight AI as an important part of how it works. Teams could create an agent skill, build with an open-weight large or small language model, or build or adapt an open-source model harness.

  Best Use of Gemma 4

  It's time to see how much you can build with a lightweight, open model. Gemma 4 packs multimodal intelligence into an open-weights model that you can access through the Gemini API. So, what can Gemma 4 bring to your project?

- **Multimodal Experience:** Work with text and images to create an assistant that understands more of what users share.
- **Focused AI Tools:** Build a focused AI tool for learning, creativity, productivity, or your community.
- **Rapid Prototyping:** Experiment with an open model while using the Gemini API to move quickly from an idea to a working prototype.

Bring your idea to life… what will you build with Gemma 4 today?
